

LESSON 4

THE SPEAKER AND ITS PARTS

The speaker is an output device. It is used for you to hear music, sound from movies and audio data from the computer like the mp3 or mp4 files.

Types of Speakers

There are a number of types of speakers that you can buy for your computer.

A. Two-Speaker System

A 2-speaker system is one of the most common types of speaker setups. It offers moderate quality sound and doesn't take up any space.

B. 2.1 Speaker

The 2.1 speaker setup involves two satellite speakers and one subwoofer. This type offers a much fuller range of sound while still saving space.

C. Wireless Speaker

More recently, wireless speakers have allowed users to avoid the mess of wires associated with surround sound speaker setups.

Do the Arithmetic

Written Activity

Activity 15

Add or subtract the objects in each row. Write the number sentence and the answer in box A. Write the names of the objects found in each row in box B. The first is done for you.

1

and

less

A $3 + 2 - 1 = 4$

B

- * 2 speaker system
- * wireless
