

## Text Picture Layer Fill

You can use the Cool Word feature to fill a text with a picture or painting.

Note: If you want stickers or other text objects to be part of your Cool Word, you must glue the objects first.

Open or paint a picture you want to use to fill your text. Follow the steps below.

- A. Click the Text tool on the tool palette.

A new text object will appear. Add the text you want to use to the text object.

- B. Select a font. Thick fonts, such as Arial Black or Impact, work best.

Resize the text to cover the part of the image you want to use.

- C. Click and drag the text object to the place where you want it over the picture.

- D. Click the Cool Word button in the editing panel.

The picture will become the fill for the text, and the background will become white.
