# Microsoft Office

## Common Office Features

Office 2010 applications share a common look and feel with Office 2007. You can find many of the same features in each program, such as Ribbon, Quick Access toolbar, various program window controls, and File tab.

Many of the tasks you perform in Office, such as creating new files, opening existing files, and executing commands, involve similar process and features throughout the Office suit. In this part, you will learn how to navigate common Office features and perform basic Office tasks.

Part 2 Common Office Features Chapter 1 Office Basics

#### **Starting and Exiting Office Applications**

In order to use a program or application, one must open/start or activate it. There are few ways to start an application. One is to launch it from the Start menu, as described in this task and the other is to double-click the program's shortcut icon on the desktop. When you finish your work, you can close the program. If applicable, you can save your work before exiting a program completely.

#### **Start and Exit Office Applications**

#### Start an Office Application

 Click at the bottom corner of the screen to open the Start menu.

Start menu window appear.

Click PowerPoint 2016 icon, for example. Or if there are no icons found, right-click, click All apps icon as shown.

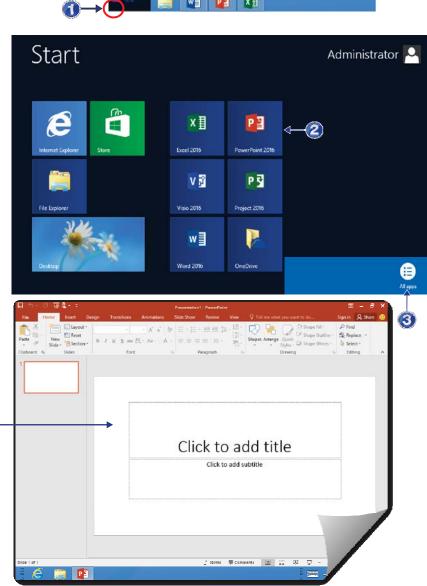

All Application installed in your computer will appear here.

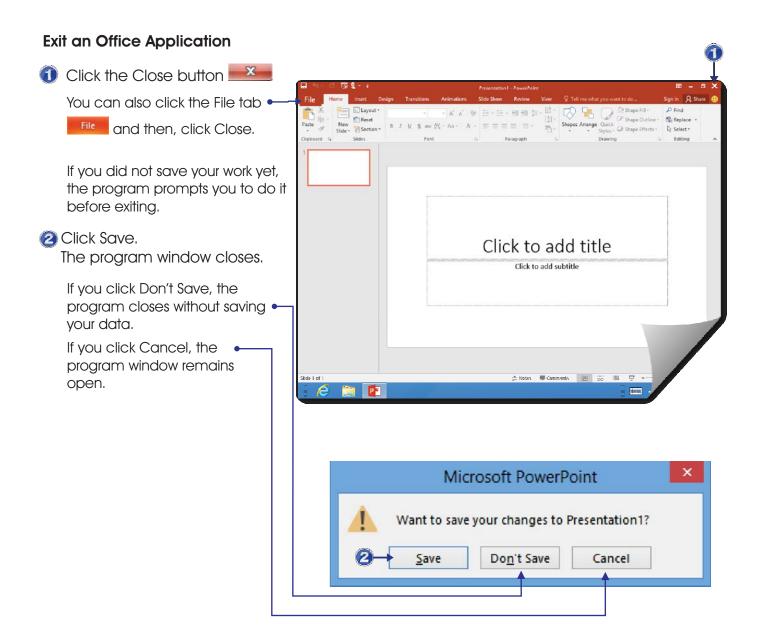

Click the icon of the application that you want to open.

The program that you have selected opens in a new window.

Note: See the next section to learn how to identify different areas of the program window.

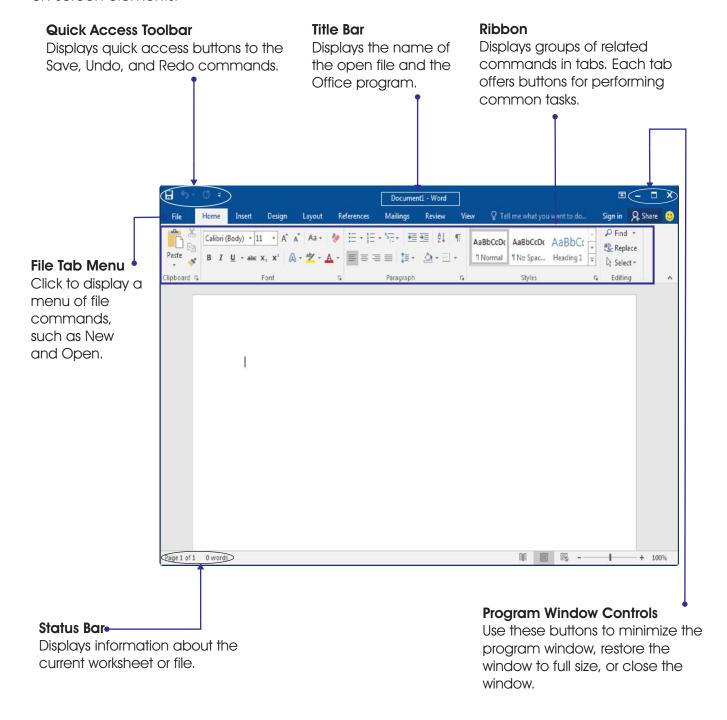

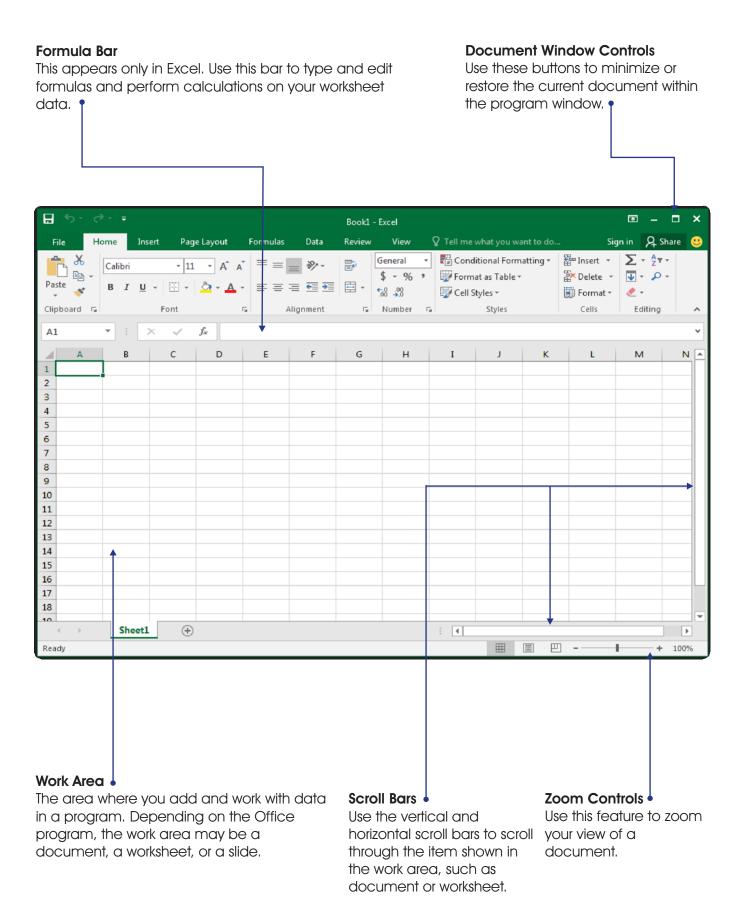

#### **Navigating the Program Windows**

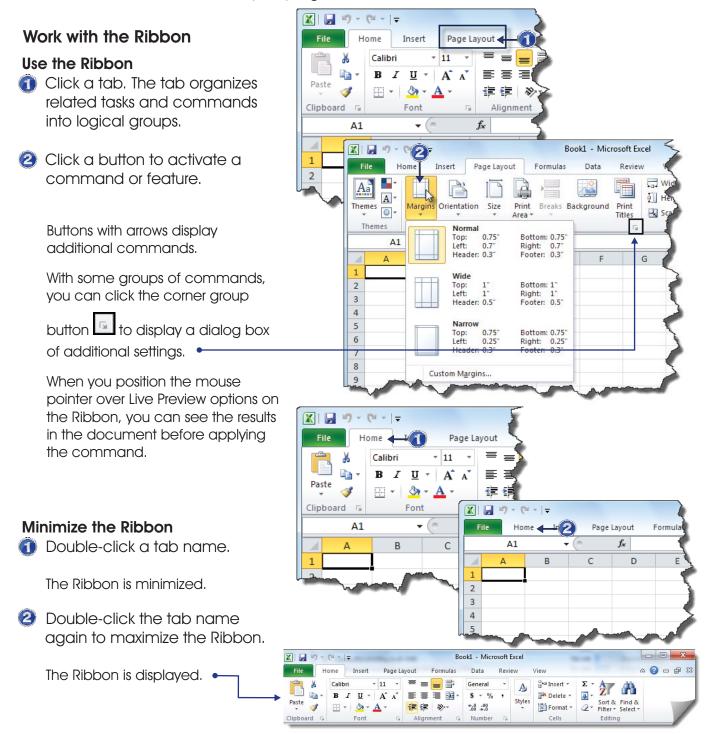

All Office programs (Word, Excel, PowerPoint, Access, Publisher and etc.) share a common appearance and many of the same features. These features include a Ribbon, which appears instead of the menus and toolbars found in previous versions of Microsoft Office; a Quick Launch toolbar, which features a customizable set of frequently used commands; and scroll bars, which you can use to navigate an open file in a program window. When you learn how to navigate one Office program, you can use the same skills to navigate the others. If you are new to Office, you should take a moment to familiarize yourself with the suite's various on-screen elements.

#### **Working with the Ribbon**

Instead of the menus and toolbars found in earlier versions of Office, Office 2010 features the Ribbon, which offers an intuitive way to locate and execute commands. The Ribbon is grouped into tabs, each containing groups of related commands. For example, the Home tab in Microsoft Word contains commands for changing the font, setting text alignment, indenting text, and so on. Some tabs appear only when needed, such as when you are working with a table or picture in a document. The Ribbon is maximized by default, but you can minimize it to view more of your program window.

#### **Customizing the Quick Access Toolbar**

The Quick Access toolbar, which appears on-screen regardless of what tab is currently shown in the Ribbon, offers quick access to Save, Undo, and Redo commands. You can customize this toolbar to include other commands, such as the Quick Print command or other command you use often. Alternatively, you can customize the toolbar to omit those commands that appear by default. By default, the Quick Access toolbar appears in the top left corner of the program window, above the Ribbon. You can choose to display the toolbar

below the Ribbon instead.

### Customize the Quick Access Toolbar

Click the Customize Quick
 Access Toolbar button =

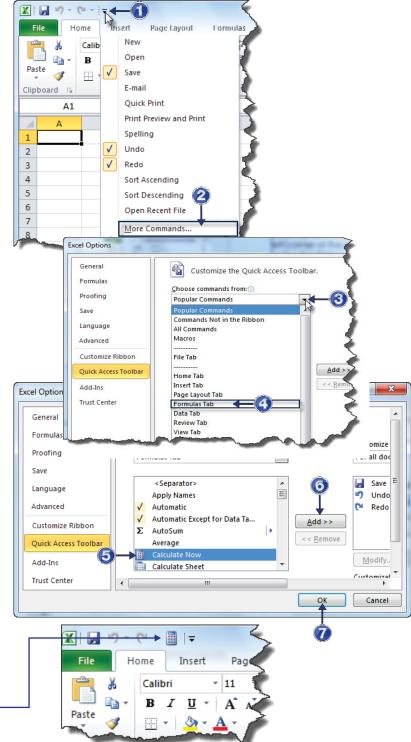

Click More Commands. You can click any of the common commands to add them to the toolbar.

You can click Show Below the Ribbon if you want to display the toolbar below the Ribbon.

The Options dialog box opens with the Customize options shown.

- Click a command group.
- 6 Click the command that you want to add to the toolbar.
- Click the Add button.
  Office adds the command.
  You can repeat Steps 3 to 6 to move additional buttons to the toolbar.
- Click OK.

The new command appears on the Quick Access toolbar. •

### **Using Tell Me in Office**

There a lot of features and commands in Office that we never use. Sometimes it's simply because we have trouble finding the tools we need. To solve the problem, Microsoft added the "Tell Me" feature, which first appeared in the Office Online suite, to Office. The "Tell Me" feature uses natural language to help you find what you're looking for. The "Tell Me" box sits inconspicuously to the right of the tabs on the ribbon bar in all the apps in the suite, except for Publisher, OneNote, and Skype.

#### How to Save using "Tell Me" in Office

Click "Tell Me" box at the upper side of the window near to View Tab.

"Tell Me" box display a list of sample.

Type Save on the "Tell Me" field.

It will automatically appear a hint which you would like to choose either Save, Save As, Save As Other Format and etc.

Click Save As.

The Save As dialog box appears.

- In the Navigation Pane, click the Libraries in which you want to save the file.
- Navigate to the folder in which you want to save the file.
- Type a name for the file in the File name field.
- Click Save.
